Professional Summary:

Software Engineer specializing in C#/.NET systems, performance optimization, and internal tooling, with experience owning business-critical libraries used across multiple production applications in a regulated healthcare environment.

Education:

University of Central Florida *Orlando, FL*

Bachelor of Science in Computer Engineering
Minor in Intelligent Robotic Systems
GPA: 3.5

Valencia College *Kissimmee, FL*

Associate of Science in Computer Science
GPA: 3.4

Skills

Programming Languages:C#, SQL, JavaScript/TypeScript, Python, C++, HTML, CSS
Frameworks & Platforms: .NET Framework, .NET Core, WPF, WinForms, Razor Pages, DevExpress, Angular, React
Cloud & Data: Azure DevOps, Azure Repos, Azure Blob Storage, MongoDB, Hive, Trino, Docker, Kubernetes
Methodologies & Compliance: Agile, Scrum, CI/CD, HIPAA Compliance

Honors:

Take Stock in Children Scholar

Medisolver of the Month — September

Employment History

Medisolv *Remote*

06/2023-Present *Software Engineer*

Job Priority:

- Maintain the company's core C# measure processing library, distributed via NuGet and consumed by multiple applications and repositories.
- Responsible for correctness, security, and performance of all healthcare measure logic; diagnose and resolve issues across dependent systems.
- Maintain and support multiple production web and submission applications that integrate with the measure processing library

Key Feats:

- Re-engineered critical processing paths and caching strategies, reducing multi-hour processing runs to minutes/seconds (~1500× performance improvement).
- Identified and resolved an Azure Storage retention defect that was duplicating historical backups, preventing unnecessary storage costs.

Built internal WPF/Console automation tools to eliminate repetitive engineering and support workflows:

- **NuGet Reference Changer**
  - Developed an internal WPF automation tool to centrally manage NuGet package versions across solutions, improving dependency consistency, reducing deployment risk, and saving significant developer time previously spent on manual updates.
- **Local Reference Changer**
  - Designed and maintained an internal WPF tool to manage local project references across solutions, enabling efficient debugging, version validation, and rapid issue isolation as part of daily development workflows.
- **Submission Mismatch Tool**
  - Designed and implemented an internal WPF data-validation tool to identify patient data mismatches, duplicates, and missing records across submission and processing systems, reducing hours of manual Excel analysis to minutes.

Real Estate Developer *Self-Employed*

12/2016-Present

- Led end-to-end renovation and improvement projects, managing budgets, timelines, materials, teams, and subcontractors to deliver projects on schedule and within financial constraints.
- Applied analytical and problem-solving skills to evaluate tradeoffs, allocate resources efficiently, and manage multiple concurrent workstreams.

Holley Performance Products *Sanford, FL*

01/2022-04/2022 *Paid Internship*

- Worked on an agile team to design and create a customer facing WPF application. The application leveraged databases, cloud resources, secure network connections, encryption, and user level permissions
- Designed new features, fixed bugs, and collaborated with a team of software engineers to achieve sprint goals
- Created an application to process and compare two binary files. The application attempts to locate both similarities and differences and provides this information to internal end users which greatly improved their efficiency
- Updated and re-engineered an existing WPF application to fit MVVM patterns and use multiple threads to improve performance

Portfolio: Additional projects, technical depth, and hardware/embedded work available at https://joshua-frazer.azurewebsites.net/
